

ArabLab 2024, exhibition stand 530

asecos presents the world of safe hazardous materials storage

asecos, the global experts in hazardous materials storage and handling, is taking part in ArabLab in Dubai from 24 to 26 September. The company will be presenting its broad product portfolio for the safe storage of hazardous substances at stand 530.

In addition to the Type 90 safety storage cabinets for flammable liquids and gases, the company's exhibition focal points also include the innovative Multirisk cabinet for the combined storage of different substances and the new ION-LINE product range for the safe storage and charging of lithium-ion batteries.

The Multirisk cabinet: Turning three into one

With the Multirisk safety storage cabinet, asecos presents the future of hazardous substance storage in the laboratory. In everyday laboratory work, it is often the case that many different hazardous substances are used, but only in small quantities. Previously, this meant having to purchase various hazardous substance cabinets, but this is no longer necessary: the type 90-tested V-CLASSIC-90 multirisk safety cabinet from asecos enables space-saving storage of flammable liquids, acids, alkalis and poisons directly at the workplace with maximum fire protection. This is made possible by a new cabinet design and an integrated, efficient ventilation system. This product innovation can be experienced live at ArabLab.

High on the agenda: Safe handling of lithium batteries

asecos will also be presenting the new ION-LINE family for the safe charging and storage of lithium batteries at the trade fair. Lithium batteries are modern, highly efficient energy storage devices and are therefore omnipresent these days. Although they are generally considered safe, damage and improper handling can make them unstable, which increases the risk of danger, especially during charging. Because the demand for safe storage and charging options has risen and continues to rise in line with the spread of rechargeable batteries, asecos has designed the ION-LINE. These are type 90 safety storage cabinets that offer fire protection from the outside in and - the primary protection objective here - from the inside out.

The asecos experts on site will be happy to explain the functions and features of the products and are available to answer your questions at any time. You can also find further information at www.asecos.com.
